

## **Disaster Affected Region Tracker Analysis - P1**

Category

Data Engineering

Project Skill

Python 6MySQL 6Data Visualization 6

Description

Project Description: Utilize satellite, GIS, and remote sensing data to identify, monitor, and visualize regions affected by disasters (e.g., floods, cyclones), aiding disaster management authorities in risk assessment and response planning.

Objective:

- Analyze historical and real-time disaster data.
- Map and track disaster-affected regions.
- Provide actionable insights for emergency planning.

Tools Used:

- Python (Pandas, Seaborn, Matplotlib)
- SQL for data management
- 

Weeks [during training]: week 2– week 3

Project Type: Geospatial Analytics / Disaster Management

Outcome:

- Maps and dashboards highlighting vulnerable areas.
- Support for policy and emergency response planning.
